

About Our Company

Matthew Roberts Inc. has been in business for over 20 years. Over these last many years, Matthew Roberts has been a well known and trusted name in the air conditioning industry. Our goal is to serve each customer for their own individual needs, and meet those needs charging a fair price and not up-selling to make a profit.

Why Maintain Your System?

Most people only think of their air conditioning system when it causes problems for them. While this may seem sufficient for most people, this can lead to a very costly outcome. When a unit begins to deteriorate, fixing a problem or replacing a part can cause another part to wear out as well. With regularly scheduled maintenance your unit will be properly maintained, and if any unexpected problems arise, you will be out first priority, ahead of those customers without a maintenance agreement.

What's Included in Your Maintenance Agreement

CONDENSOR:

Suction & head pressure, volts & amp draws, electrical connections, tighten & clean contacts, oil motor (if necessary), and inspect coils.

AIR HANDLER:

Check for signs of mold, electrical connections, volts & amp draws, check fan relay, inspect and blow out drain lines, add algae tabs for the drain pan, inspect coil, clean or replace filter*, check & service heating.

THERMOSTAT:

Check connections and calibration.
